International Exploratory Workshop (SNSF)

Manipulating light in pre-modern times. Architectural, artistic and philosophical aspects
Manipolando la luce in epoca premoderna. Aspetti architettonici, artistici e filosofici

Organized within the research project „From Ravenna to Vals. Light and Darkness in Architecture from the Middle Ages to the Present“ the international workshop will take place at the Accademia di Architettura Mendrisio, Università della Svizzera italiana. The conference will mark the opening of the new Istituto di storia e teoria dell'arte e dell'architettura.

Light renders architecture its functionality. Layers of meaning, from the sheer functional to the utmost transcendental ascribed to built structures have been, throughout time, underlined by the conscious use of light. The present workshop intends to contribute a developing topic in current academic scholarship: the historicization of the employment of light as a dynamic factor (daylight and artificial light) in sacred spaces in a “longue durée”-perspective until the shift due to the introduction of electrical illumination.

Religious architecture and visual art in Eastern and Western Mediterranean areas will be in focus in order to elaborate, by comparison, similarities and differences in the modes of regulating natural and artificial light as well as in the meanings attributed to its effects. By providing an international discussion forum with a spectrum covering a time span of one millennium (from Late Antiquity to Baroque) and reuniting art historical, archaeological, technical, theological and philosophical approaches, the meeting will not only facilitate an interdisciplinary and inspiring exchange of ideas and methods, but will also allow promising researchers to present and discuss their current work with established authorities of international reputation.
