Nineteenth-Century Art Worldwide (NCAW): digital humanities

New York, NY, May 7-Jun 24, 2019

Deadline: Jun 24, 2019

Elizabeth Buhe, Fordham University

Nineteenth-Century Art Worldwide (NCAW) is pleased to announce a digital humanities publishing initiative supported by a grant from the Terra Foundation for American Art. The editors of NCAW are now accepting proposals for articles addressing art and visual culture of the Americas in the long nineteenth century, from the American Revolution to World War I. NCAW seeks proposals that take full advantage of the potential of digital publishing by using digital technologies in the article's research or publication phase, or both. Strong proposals will demonstrate how the production of digital tool(s) and/or components will lead to a scholarly argument's key insights (either the tool/component enhanced the depth of insight or made it possible) and/or will illustrate aspects of that argument in dynamic/interactive ways.

NCAW welcomes proposals that creatively or innovatively juxtapose digital tools and/or components with art historical analysis. NCAW encourages authors to use open source software when possible. Proposal deadline: June 24, 2019.

While by no means limited to the following, proposals might explore:

- High resolution imaging or dynamic image presentation (e.g., panoramas, zoom images, visual essays, x-ray or infrared reflectography, moving images, 3D images of art objects, annotated musical scores, annotated digital facsimiles)
- "Big data" mining and analysis (e.g., social network analysis or text mining using analytics programs like Gephi, Network Workbench)
- Mapping and Geographic Information Systems (GIS) (e.g., depictions of sites, locations of objects, paths of travel, using online mapping tools like MapBox, Timemapper, Neatline)

NCAW is a pioneer in publishing art historical digital humanities projects. For examples of already-completed digital humanities projects published in NCAW, see our Digital Humanities Articles page.

To propose a digital humanities project, please submit:

- A. Abstract (500 words maximum) as a Microsoft Word document detailing the scholarly content of the article, including how information gleaned from the proposed digital tool will impact the article's interpretive claims
- B. Abstract (500 words maximum) as a Microsoft Word document outlining the appearance/format of the digital tool(s) and explaining how the author plans to present the article and tool within

ArtHist.net

the NCAW framework (technologies used, layout, etc.). Also provide link(s) from existing digital project(s) that resemble your proposed project functionally, aesthetically, or in the technologies

used, followed by several sentences describing which elements of that project will differ from/em-

ulate your proposed digital tool

C. Budget (1 page maximum)

· D. CV

Authors are not expected to have extensive technical expertise themselves, but should be general-

ly knowledgeable about the technical possibilities related to their project and should be able to articulate how digital research methods and NCAW's digital publication format connect with their

research questions. Upon acceptance of a proposal authors will identify, in discussion with NCAW

editors, the digital tools/software to be used and, if necessary, will be expected to identify techni-

cal collaborators. NCAW editors will assist with the development of a timeline and with guidelines

for workflow, but authors will be responsible for managing their projects.

If interested contributors have an idea for a digital humanities project but would like to discuss it

with the editors first, we would be happy to talk with you about your ideas in advance of the dead-

line.

Please send proposals to Managing Editor Petra Chu (petra.chu[at]shu.edu), Executive Editor Isa-

bel Taube (taubeisa[at]gmail.com) and Digital Humanities Editor Elizabeth Buhe (ebuhe[at]nyu.e-

du).

Proposal deadline: June 24, 2019
