Media and Effects of Public Communication in the Time of European
Reformation: Visual arts, Music, Performance, Rhetoric

November 30th - December 2nd , 2006

Academy of Sciences, Narodni 3, Prague

Organized by Institute of Art History, Czech Academy of Sciences, and
Department of Art History, Masaryk University in Brno

The interdisciplinary conference intends to shed a new light on spreading
Reformation views and their mutual confrontation with the old faith in the
14th to the 17th century in Central Europe, with special focus on the
Bohemian Crown lands. For the purpose of framing it, we identify the core
theme of the conference as the "public communication". Image, music, public
performance and rhetoric we understand each as a communication means with a
specific form, but with united effect in construction of collective and
individual confessional identities. Our key question will be the evolution,
transformation, and amendment of the media message in mutual relation to the
techniques of imagery, gestures, sound and spoken word, or alternatively, in
relation to presumed public opinion to be met or achieved.

No registration needed. Complete sessions will be translated between Czech
and English
