Terms of Art: Design, Description, and Discovery in Cataloging

Institutions such as museums, libraries, and archives have a mission to preserve, interpret, and disseminate cultural heritage. In addition to new acquisitions for their collections, these institutions must also update the tools with which researchers access and study these holdings, objects, and works of art. Increasingly, stakeholders like academics, educators, and the public treat a collection's digital representation—its metadata records—as an entry point for discovery. Paradoxically, these web-based experiences meant to expose collections to broad audiences often assume users have specialized knowledge of the terms and processes GLAM (Galleries, Libraries, and Art Museums) institutions use to describe their own work, making them inaccessible to the majority of visitors. Additionally, variation and evolution of language often outpaces or does not align with public understanding. For example, someone interested in 17th-century Dutch art might not know that the phrase “Dutch Golden Age” has colonialist implications and has been removed from many museums' internal databases. The search language isn't wrong, it's just outmoded.

The Hood Museum of Art and Dartmouth Research Computing are organizing a virtual symposium to bring together museums, libraries, and archives to discuss issues of access and ethical vocabularies in cultural heritage. The aim of the virtual conference is to develop the debate about how the language we use to describe collections impacts the communities that create and seek out art.. The organizers hope to prompt dialogue on the issues curators and researchers face in trying to maintain equitable and anti-racist progress and research. Additionally, this symposium will emphasize the role of technologists who specialize in user-centered design as critical to promoting equity in information systems. In combining subject-matter specialists and user-centered design technologists, we aim to bridge the communication gap between institutions and the publics they serve, allowing each to educate the other about how they describe collections.

The virtual conference, to take place 22-24 February 2023, will feature panels, workshops, and roundtables from different institutions around the world.

This conference is made possible by the generous support of the Leslie Center for the Humanities.

Speakers will be compensated at the rate of \$250 per person.

Types of Panels:

- Paper, poster, or case study (20 minute presentation with 10 minute Q&A)
- Roundtable or panel discussion (45-50 minute presentation with 10 minute Q&A)
- Extended discussions and workshops (90 minute participatory session with 5-10 minute break, for ideation, brainstorming, cross-pollination)
- "Other" (if there's a session you would like to submit that doesn't fit the above criteria: prototyping, hackathon/datathon)

Organizers:

Meredith Steinfels, Assistant Director, Digital Platforms, Media, and Archives

John Bell, Program Director, Data Experiences and Visualizations Studio

Ashley Offill, Associate Curator of Collections

Elizabeth Rice Mattison, Andrew W. Mellon Associate Curator of Academic Programming

For application requirements and submission, please visit: <https://dartgo.org/terms-of-art>

Deadlines:

Session submission: August 31, 2022

Approval and feedback: October 3–7, 2022
