Online, Oct 25, 2024–Mar 28, 2025

Dr. Amrei Buchholz

Border Topographies: Objects, Performances, Infrastructures.
curated by Sasha Rossman.

The Network Topographic Visual Media is pleased to announce the programme of the autumn and winter season 2024/2025. Six speakers present work exploring how borders and border crossings come into view – or are enacted and performed – through a variety of media and practices. The talks will range historically from the early modern period to today and will examine a broad array of media including contemporary border infrastructures of migration in Greece, printed textiles ("indiennes"), maps of Louisiana, bells, board games, and digital mapping projects that track connections between French colonial sugar plantations and the 18th-century Parisian art market. Investigating the myriad ways in which borders and boundaries make themselves manifest necessarily involves examining how they are mediated through objects and practices. This series of talks invites participants to do just that, and to consider border topographies as part of an expansive media-scape.
