Mettere mano: Reworking Early Modern Drawings.
Gernsheim Study Days.

“... con questo, che Taddeo potesse correggere e mettere mano nei disegni e cartoni di Federigo a suo piacimento ...” In the *Vita* of Taddeo Zuccari, Giorgio Vasari describes the reworking of drawings – in contrast to that of paintings – as a common and spontaneous practice. The 2025 Gernsheim Study Days are dedicated to all aspects of reworking, retouching, and repairing early modern European drawings, engaging with both artistic and material issues.

Few other media are as easily and as quickly altered as paper: folding, pasting, trimming, and bleaching require readily accessible tools and minimal expertise in their handling. Reworking by another hand – highlighting, retracing, adding or erasing marks – as well as archival and curatorial practices – mounting and re-mounting, inscribing, stamping, and annotating – can alter the drawing’s appearance, reception, attribution, and market value. Equally important is the slow material change of paper or ink over time, triggered by the most common environmental conditions. Being uniquely vulnerable, drawings are a productive starting point for thinking about the ways in which the material turn might be brought to bear on an object’s material afterlife, and beyond the artist’s initial conception and expression.

This conference brings together scholars, curators, and conservators to think critically about early modern practices of material interaction and manipulation as they applied to drawings.
